

Setup myPortal@work

1. Start myPortal@work
2. First time you start, you will be presented with a login page.
Enter the follow data:

User name	– Provided by admin
Password	– Provided by admin
Public IP Address:port	(leave blank)
LAN IP Address:Port	10.151.200.132:8802

3. Click **Login**. No, you're not finished yet, keep reading!

4. VoIP Settings

Click **Your Name** (to the right of )

Select: **Settings**

Select: **VoIP**

5. Enable VoIP Enable ☒ VoIP enabled

6. Click on **Advance ICE settings**

7. Just below **STUN or TURN URI** you will see some grey text

STUN or TURN URI

stun:ip:port

Click on the grey text and add: stun:turn.phoneapp.unify.com:3478
or stun.sipgate.net:3478

8. Click **Add Server** and the text you entered will appear grey

9. Click **Check NAT type**. You should get a message like this:

NAT Type: Simple

VoIP services can be used without restrictions.

Ok

Cancel

At this point, myPortal@work is ready to make/receive calls.

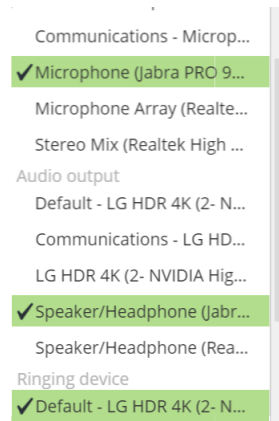

Some settings that may help

1. Device settings

Click the device settings on the right, top toolbar 

Using the standard PC speakers and PC microphone may not be ideal.

Here is a screenshot of a machine which has a Jabra USB headset.

Here we have the Jabra Microphone selected

Here we have the Jabra Speaker selected

Is this case I have a different device for my ***Ringing device***

This means I can take the headset off and I won't miss a call when someone rings.

2. Windows 10 Volume controls, right side of taskbar -

When you click this icon, you will see the volume control for you default sound device

That's not doing any good, read on...

3. Click (top right) and you will see the controls for all devices.

4. Now you can select the headset device and change the volume.

5. Once done go back and select the device you want as your default playback device
